Modes, 51

| Continuous Mandatory Ventilation, 51 |
| Assist-Control Ventilation, 52 |
| Assisted Mechanical Ventilation, 55 |
| Intermittent Mandatory Ventilation, 58 |
| Synchronized Intermittent Mandatory Ventilation, 59 |
| Pressure Support Ventilation, 60 |
| Continuous Positive Airway Pressure, 64 |
| Airway Pressure Release Ventilation, 66 |
| Pressure Control Inverse Ratio Ventilation, 68 |

Mandatory Minute Ventilation, 69

Combining Modes, 71

Dual Control Modes, 71

| Dual Control Within a Breath, 71 |
| Dual Control Breath-to-Breath—Pressure-Limited, Flow-Cycled Ventilation, 73 |
| Dual Control Breath-to-Breath—Pressure-Limited, Time-Cycled Ventilation, 73 |

Automode, 74

Adaptive Support Ventilation, 76

Adaptive Tidal Volume Support, 78

Automatic Tube Compensation, 79

Proportional Assist Ventilation, 80

SMARTCAREPS, 82

Chapter 3
The Patient-Ventilator Interface: Ventilator Circuit, Airway Care, and Suctioning, 89
Richard D. Branson

The Ventilator Circuit, 90

| Ventilation, 90 |
| Exhalation Valves, 91 |

Care of the Artificial Airway, 92

| Tube Placement, 92 |
| Securing the Tube, 96 |
| Special Endotracheal Tubes, 97 |
| Silver-Coated or Silver-Impregnated Endotracheal Tubes, 97 |
| Subglottic Suction Endotracheal Tubes, 97 |
| Oral Care, 98 |
| Management of the Endotracheal Tube Cuff, 98 |
| Monitoring Cuff Pressure, 99 |

Suctioning, 100

| Bronchial Suctioning, 101 |
| Use of Saline Instillation, 102 |
| Complications of Suctioning, 102 |

Patient-Ventilator System Check, 103
Chapter 4
Humidification and Aerosol Therapy, 111
Richard D. Branson

Physical Properties, 112
Physiologic Principles, 114
High-Flow Humidifiers, 115
  Types of High-Flow Humidifiers, 116
Passive Humidifier, 116
Characteristics of Artificial Noses, 119
  Moisture Output, 119
  Resistance, 119
  Dead Space, 120
  Additives, 120
  Cost, 120
Choosing the Right Passive Humidifier, 121
Use of Humidification Devices During Mechanical Ventilation, 121
Active Hygroscopic Heat and Moisture Exchangers, 123
  Heat and Moisture Exchanger Booster, 124
Aerosol Therapy During Mechanical Ventilation, 124
  Physical Properties, 124
  Types of Aerosol Generators, 125
Choosing an Aerosol Delivery System, 128
  Aerosol Delivery During Mechanical Ventilation, 128
  Monitoring Bronchodilator Efficacy, 130
  Recommendations for Aerosol Therapy in Mechanically Ventilated Patients, 132
Aerosolized Pharmacologic Agents, 132
  Bronchodilators, 132
  Anticholinergics, 135
  Anti-Inflammatory Agents, 136
  Aerosolized Antibiotics, 137

Chapter 5
Ventilator Monitors and Displays, 146
Neil R. MacIntyre

Pressure and Flow Sensors, 147
  Pressure Sensors, 147
  Flow and Volume Sensors, 148
Output from Pressure/Flow/Volume Sensors, 149
  Monitoring Maneuvers, 149
Gas Analyzers and Gas Exchange Monitors, 151
  Display Screens, 151
Future Sensors and Monitors, 151
Ventilator Alarm Systems, 153
  Levels of Events and Alarm Requirements, 153
  Alarm Cost Effectiveness, 155

SECTION II
PHYSIOLOGY, 159

Chapter 6
Respiratory System Mechanics, 159
Neil R. MacIntyre

Measurements, 159
Lung Inflation and Respiratory System Mechanics: Equation of Motion, 162
  Compliance (Elastance), 162
  Resistance, 164
Mechanical Loads, 165
Interaction of Respiratory System Mechanics with Ventilator Settings, 167
  Mechanical Determinants of Delivered Ventilation, 167

Chapter 7
Alveolar-Capillary Gas Transport, 171
Neil R. MacIntyre

Steady-State Alveolar-Capillary Pressure Gradients, 171
Ventilation-Perfusion Matching, 173
Positive Pressure Ventilation Effects on Ventilation-Perfusion Matching, 174
  Inspiratory and Expiratory Positive Pressure, 174
  Inspiratory Flow Pattern and Inspiratory-Expiratory Time Relationship, 177
  Intrathoracic Pressures and Perfusion, 178
Alveolar-Capillary Gas Transport in the Context of Overall Oxygen Delivery, 178

Chapter 8
Patient-Ventilator Interactions, 182
Lawrence R. Tom and Catherine S. H. Sassoon

Determinants of Spontaneous Ventilation, 183
  Respiratory Control System, 183
  Equation of Motion, 184
Patient-Ventilator Interactions, 185
  Patient-Related Factors, 185
  Ventilator-Related Factors, 186
The Future, 193

Chapter 9
Cardiopulmonary Interactions, 198
David N. Hager and Henry E. Pessler

Mechanical Forces During Ventilation, 199
  Venous Return, 199
  Ventricular Interdependence, 199
  Pulmonary Vascular Resistance, 200
Pulmonary Vascular Capacitance, 200
Ventricular Afterload, 200
Stress on Abdominal Vessels, 200
Clinical Applications: Transient Effects, 200
Valsalva Maneuver, 200
Respiratory Changes in Pulse Pressure, 201
Clinical Applications: Steady-State Effects, 201
PEEP, 201
Weaning, 203

Chapter 10
Ventilator-Induced Lung Injury, 206
Renee D. Stapleton and Kenneth P. Steinbert

Alveolar Rupture and Extra-Alveolar Air, 207
Stretch-Induced Lung Injury, 208
Experimental and Mechanistic Evidence for VILI, 208
Clinical Studies Providing Evidence for VILI, 211
Summary, 212

SECTION III
ADJUNCTIVE THERAPY, 217

Chapter 11
Nutrition, 217
Richard D. Branson and Jay A. Johannigman

Malnutrition in the Mechanically Ventilated Patient, 218
Effect of Underfeeding, 218
Effect of Overfeeding, 219
Nutritional Assessment, 220
Nutritional Requirements, 221
Performance of Indirect Calorimetry, 222
Design of the Nutrition Support Regimen, 225
Monitoring Response and Patient Tolerance, 229
Conclusions, 230

Chapter 12
Sedation, Analgesia, and Neuromuscular Blockade, 235
Bryan A. Fisk and Lisa K. Moores

Pain, 237
  Rationale for Pain Management, 237
  Recognition of Pain, 237
  Management of Pain, 238
Delirium, 240
  Recognition of Delirium, 240
  Treatment of Delirium, 240
Sedation, 241
  Rationale for Sedation Management, 241
  Titration and End Points, 241
  Drugs Used for Sedation, 242
  Approach to Management, 243
Neuromuscular Blockade, 245
  Drugs Used for Neuromuscular Blockade, 245
  Monitoring Use of NMBAs, 247
Summary, 248

Chapter 13
Patient Positioning, 252
Joseph A. Govert

Effects of Posture and Position on Healthy Patients, 253
Lung Volumes, 253
Regional Pleural Pressures, 253
Regional Lung Inflation, 254
Pulmonary Mechanics, 255
Distribution of Ventilation, 256
Distribution of Perfusion, 256
Ventriculation-Perfusion (V/Q) Relationships, 256

Effects of Posture and Position on Patients with Respiratory Disease, 256
Neuromuscular Disease, 256
Obstructive Airway Disease, 257
Unilateral Lung Injury, 258
Acute Respiratory Distress Syndrome, 258

Chapter 14
Ventilator-Associated Pneumonia, 266
Mohammed Hijazi and Mariam Al-Ansari

Incidence and Risk Factors, 266
Morbidity, Mortality, and Cost, 267
Pathogenesis, 268
  Colonization, 269
  Respiratory Therapy Equipment, 269
  Host Defenses, 270
Microbiology, 270
Diagnosis, 272
  Clinical Features and Chest X-Ray, 272
  Qualitative Culture Techniques, 273
  Quantitative Culture Techniques, 273
Therapy, 274
  Empiric Therapy, 274
  Pharmacologic Consideration, 275
  De-Escalation and Specific Therapy, 276
  Duration of Therapy, 276
  Response to Therapy, 277
Prevention, 277
SECTION IV
CLINICAL APPLICATIONS, 287

Chapter 15
Management of Parenchymal Lung Injury, 287
Neil R. MacIntyre

Pathophysiology of Parenchymal Lung Injury, 288
Goals of Ventilatory Support, 288
Mechanical Ventilation Strategies, 289
Mode Selection, 289
Frequency-Tidal Volume Settings, 290
Positive End-Expiratory Pressure and Inspired Oxygen Concentration, 291
Novel Approaches to Lung Protection in Parenchymal Lung Injury, 292
Airway Pressure Release Ventilation, 293
High-Frequency Ventilation, 293
Other Considerations in Managing Parenchymal Lung Injury, 293
Outcomes of Parenchymal Lung Injury, 293

Chapter 16
Management of Obstructive Airway Disease, 297
Neil R. MacIntyre

Pathophysiology of Obstructive Airway Diseases, 297
Goals of Ventilatory Support, 298
Mechanical Ventilation Strategies, 298
Mode Selection, 298
Tidal Volume/Frequency/ Inspiratory Time, 300
Positive End-Expiratory Pressure/Inspired Oxygen Concentration, 301
Other Considerations in Ventilatory Management, 302
Outcomes of Respiratory Failure in Obstructed Airway Disease, 303

Chapter 17
Unique Patient Populations, 306
John H. Sherer and Lisa K. Moores

Traumatic Brain Injury, 307
Pathophysiology and Unique Features, 307
Management, 307
Neuromuscular Disease, 309
Pathophysiology and Unique Features, 309
Management, 309
Lung Transplantation, 310
Donor Care, 310
Perioperative Care of Transplant Recipients, 311
Burn Injuries, 313
Pathophysiology and Unique Features, 313
Assessment, 313
Management, 313
Perioperative Respiratory Failure, 313
Pathophysiology and Unique Features, 313
Management, 313
Conclusions, 314

Chapter 18
Discontinuing Mechanical Ventilation, 317
Neil R. MacIntyre

Considering Ventilator Discontinuation, 318
Assessing the Potential for Discontinuation, 318
Next Steps for Patients With Successful Spontaneous Breathing Trial, 319
Managing the Not-Yet-Ready-to-Be Discontinued Patient, 320
The Impact of Newer Feedback Controllers on Discontinuation, 321
Approaches for the Difficult-to-Wean Patient, 322

Chapter 19
Prolonged Mechanical Ventilation, 325
Christopher E. Cox and Shannon S. Carson

Prolonged Mechanical Ventilation, 326
Epidemiology of PMV, 326
Economics of PMV, 326
PMV Patients, 327
Ventilator-Dependent Patients, 327
Predicting the Need for PMV, 328
Reducing the Likelihood of PMV, 328
Timing for Tracheostomy Placement, 329
Placing a Tracheostomy, 331
Outcome of PMV Patients, 331
Disposition, 331
Weaning Success, 331
Survival, 331
Quality of Life and Functional Status, 331
Cost-Effectiveness, 332
Most Effective Way to Wean PMV Patients, 332
Predicting Weaning Success, 333
Interventions to Improve PMV Outcomes, 333
Post-Acute Care Facilities and Respiratory Care Units in PMV Care, 335
Palliative Care in the PMV Population, 335
Summary, 336
Chapter 20
Mechanical Ventilation During Transport and Cardiopulmonary Resuscitation, 339
Richard D. Branson and Jay A. Johannigman

Ventilation During Cardiopulmonary Resuscitation, 340
  Standards for Ventilation and Devices, 340
  Lung Compliance After Cardiac Arrest, 340

Techniques of Emergency Ventilation, 341
  Expired Air Resuscitation, 341
  Cricoid Pressure, 342
  Disease Transmission, 342
  Barrier Devices, 343
  Mouth-to-Mask, 344

Bag-Valve Devices, 346
  Description, 346
  Bag-Valve Device Performance, 347
  Ventilation Efficacy, 347
  Delivered Oxygen Concentration, 348
  Nonrebreathing Valve Performance, 348

Oxygen-Powered Breathing Devices, 349
  Description, 349
  Assessment, 350
  Ventilator-to-Mask Ventilation, 350

Impedence Threshold Device, 352

Transport of the Mechanically Ventilated Patient, 352
  Rationale for Transport, 352
  Preparation, 352
  Equipment, 353
  Characteristics of a Ventilator for Intrahospital Transport, 354
  Physiologic Effects and Risks of Transport, 357

Chapter 21
Noninvasive Mechanical Ventilation, 366
Nicholas S. Hill

Rationale for the Use of Noninvasive Ventilation, 367

Indications for Noninvasive Ventilation:
  Acute Applications, 367
  Best Established Indications, 367

Indications Supported by Weaker Evidence, 369
  Other Obstructive Diseases, 369
  Extubation Failure, 369
  Postoperative Respiratory Failure/Insufficiency, 370

Do Not Intubate Status, 370
Other Acute Applications of Noninvasive Ventilation, 370

Selection Guidelines for Noninvasive Ventilation in Acute Respiratory Failure, 370
  Determinants of Success/Failure, 370
  Selection Process, 371

Long-Term Applications of Noninvasive Ventilation, 372
  Restrictive Thoracic Disease, 372
  Chronic Obstructive Pulmonary Disease, 372
  Obesity Hypoventilation, 373
  Selection Guidelines, 373

Contraindication to Long-Term Noninvasive Ventilation, 373

Techniques and Equipment for Noninvasive Ventilation, 374
  Noninvasive Positive-Pressure Ventilation, 374
  Interfaces, 375
  Ventilators for Positive-Pressure Noninvasive Ventilation, 378

Application of Noninvasive Positive-Pressure Ventilation, 381
  Initiation, 381
  General Considerations, 382
  Adaptation and Monitoring, 383
  Long-Term Applications, 383
  Common Problems and Possible Remedies, 384

Summary and Conclusions, 386

Chapter 22
Modifications on Conventional Ventilation Techniques, 392
John D. Davies

Airway Pressure Release Ventilation, 393
  Description and Rationale, 393
  Clinical Data, 394
  Recommendations, 394

Independent Lung Ventilation, 394
  Description and Rationale, 394
  Clinical Data, 397
  Recommendations, 397

Proportional Assist Ventilation, 397
  Description and Rationale, 397
  Clinical Data, 398
  Recommendations, 400

Tracheal Gas Insufflation, 400
  Description and Rationale, 400
  Clinical Data, 401
  Recommendations, 401
Modifications for Nuclear Magnetic Scanners and Hyperbaric Chambers, 402
MRI-Compatible Equipment, 402
Hyperbaric Chamber-Compatible Equipment, 402

Chapter 23
High-Frequency Ventilation, 407
Michael A. Gentile and Neil R. MacIntyre

Devices, 408
Jets, 408
Oscillators, 410
Mechanism of Gas Transport, 411
Applications, 412
Complications, 414
Summary, 414

Chapter 24
Extracorporeal Techniques for Cardiopulmonary Support, 418
Michael A. Gentile and Ira M. Cheifetz

History of Extracorporeal Life Support, 418
Patient Selection and Criteria for Extracorporeal Life Support, 419
Types of Extracorporeal Life Support, 421
Venoarterial Extracorporeal Life Support, 421
Venovenous Extracorporeal Life Support, 422
Complications Associated With Extracorporeal Life Support, 423
Patient Management During Extracorporeal Life Support, 423
Ventilator and Respiratory Care, 423
Anticoagulation, 424
Sedation and Analgesia, 424
Nutrition, 424
Current Status of Extracorporeal Life Support and Outcome in Pediatrics, 424
Extracorporeal Life Support Technology for Adult Respiratory Failure, 424
Summary, 426

Chapter 25
Heliox and Inhaled Nitric Oxide, 429
Dean R. Hess

Heliox, 429
Physics and Physiology, 429
Clinical Applications, 431
Delivery Systems for Heliox, 435
Inhaled Nitric Oxide, 437
Biology of Nitric Oxide, 437
Selective Pulmonary Vasodilation, 438
Clinical Applications, 439
Toxicity and Complications of Inhaled Nitric Oxide, 439
Delivery Systems for Inhaled Nitric Oxide, 440

Appendix 1
Mechanical Ventilation Case Studies, 451
Neil R. MacIntyre

Appendix 2
Assessment Question Answers, 467
Glossary, 473
