Abbreviations (inside front cover and back cover)

PART 1
Basic Concepts and Core Knowledge in Mechanical Ventilation

1 Oxygenation and Acid-Base Evaluation, 1
   Review of Arterial Blood Gases, 2
   Evaluating Oxygenation, 2
   Evaluating the Transfer and Uptake of Oxygen from the
   Alveoli—P(A-a)O₂, PaC0₂, P₅O₂, and PaCO₂/FIO₂, 4
   Changes in Alveolar Ventilation Associated with Changes in
   P₅O₂ and P₅CO₂, 6
   Alveolar Ventilation, PaCO₂, and VCO₂, 7
   Changes in pH, PaCO₂, and Sodium Bicarbonate, 7
   Changes in pH caused by Changes in PaCO₂, 8
   Changes in Plasma Bicarbonate Caused by Changes in
   PaCO₂, 8
   Metabolic Changes in Bicarbonate and pH, 11

2 Basic Terms and Concepts of Mechanical Ventilation, 15
   SECTION I: Physiological Terms and Concepts
   Related to Mechanical Ventilation, 16
   Normal Mechanics of Spontaneous Ventilation, 16
   Lung Characteristics, 18
   Time Constants, 21
   SECTION II: Types of Ventilators and Terms
   Applied to Mechanical Ventilation, 23
   Types of Mechanical Ventilation, 23
   Definition of Pressures in Positive Pressure Ventilation, 26

3 How Ventilators Work, 31
   Historical Perspective on Ventilator Classification, 32
   Internal Function, 32
   Power Source or Input Power, 32
   Control Systems and Circuits, 35
   Power Transmission and Conversion System, 39

4 How a Breath Is Delivered, 45
   Basic Model of Ventilation in the Lung during Inspiration, 46
   Factors Controlled and Measured by the Ventilator during
   Inspiration, 47
   Overview of Inspiratory Waveform Control, 48
   Four Phases of a Breath and Phase Variables, 49

PART 2
Initiating Ventilation

5 Establishing the Need for Mechanical Ventilation, 63
   Acute Respiratory Failure, 64
   Patient History and Diagnosis, 65
   Physiological Measurements in Acute Respiratory Failure, 69
   Overview of Criteria for Mechanical Ventilation, 72
   Possible Alternatives to Invasive Ventilation, 72
   Patient Cases, 75

6 Selecting the Ventilator and the Mode, 81
   Invasive or Noninvasive Ventilation: Selecting the Patient
   Interface, 82
   Methods of Noninvasive Support and Appropriate Patient
   Interfaces, 82
   Full and Partial Ventilatory Support, 84
   Mode of Ventilation and Breath Delivery, 84
   Type of Breath Delivery, 84
   Targeting Volume as the Control Variable, 84
   Targeting Pressure as the Control Variable, 85
   Breath Delivery and Modes of Ventilation, 87
   Bilevel Positive Airway Pressure, 96
   Closed Loop Ventilation, 96
   Less Frequently Used Closed Loop Modes of Ventilation, 97

7 Initial Ventilator Settings, 105
   Determining Initial Ventilator Setting during Volume
   Ventilation, 106
   SECTION I: Initial Settings during Volume
   Ventilation, 106
   Setting Minute Ventilation, 106
   Tidal Volume and Rate, 108
   Relationship of Tidal Volume, Flow, Total Cycle Time, and
   Inspiratory to Expiratory Ratio, 111
   Inspiratory Flow and Flow Patterns, 113
   Setting the Minute Ventilation: Special Considerations, 116
   Inspiratory Pause during Volume Ventilation, 116
   Actual Clinical Examples of Ventilator Adjustment, 117
SECTION II: Determining Initial Ventilator Settings during Pressure Ventilation, 117
Setting Baseline Pressure-Physiological PEEP, 118
Determining Tidal Volume Delivery in Pressure Ventilation, 118
Initial Settings for Pressure Support Ventilation, 118
Initial Settings for Pressure Control Ventilation, 120
Initial Settings for Bilevel Positive Airway Pressure Ventilation, 120
Initial Settings for Dual Control Pressure Ventilation Modes with Volume Targeting, 121

Final Considerations in Ventilator Setup, 127

SECTION I: Selection of Additional Parameters and Final Ventilator Setup, 128
Selection of Fractional Inspired O2, 128
Sensitivity Setting, 128
Humidification, 129
Alarms, 132
Action during Ventilator Alarm Situations, 133
Periodic Hyperinflation or Sighing, 133
Final Considerations in Ventilator Equipment Setup, 135
Selecting the Appropriate Ventilator, 135
Evaluation of Ventilator Performance, 136

SECTION II: Initial Ventilator Settings for Specific Patient Situations, 136
Chronic Obstructive Pulmonary Disease, 136
Neuromuscular Disorders, 139
Asthma, 140
Closed Head Injury, 141
Adult Respiratory Distress Syndrome, 143
Acute Cardiogenic Pulmonary Edema and Congestive Heart Failure, 145

PART 3
Monitoring in Mechanical Ventilation

9 Initial Assessment of the Mechanically Ventilated Patient, 151
Documentation of the Patient-Ventilator System, 152
The First 30 Minutes, 153
Monitoring Airway Pressures, 158
Vital Signs, Blood Pressure, and Physical Examination of the Chest, 161
Management of Endotracheal and Tracheostomy Tube Cuffs, 164
Monitoring Compliance and Airway Resistance, 168
Comment Section of the Ventilator Flow Sheet, 172

10 Ventilator Graphics, 177
Relationship of Pressure, Volume, Flow, and Time, 178

SECTION I: Volume Ventilation with Constant Flow, 179
Producing Ventilator Graphics, 179
Calculations, 180
A Closer Look at the Flow-Time Scalar in VC-CMV, 181
Changes in the Pressure-Time Curve, 184
Volume Scalar, 185
Key Points of Volume Ventilation Graphics, 187

SECTION II: Pressure Ventilation, 187
Pressure Ventilation with a Constant Pressure Waveform, 187
Key Points of Pressure Ventilation Graphics, 190

SECTION III: Pressure Support Ventilation, 191
Details of the Pressure-Time Waveform in PSV, 191
Flow Cycling during PSV, 194
Automatic Adjustment of the Flow-Cycle Criterion, 194
Use of PSV with SIMV, 195

SECTION IV: Pressure-Volume Loops, 194
Components of the P-V Loop, 195
P-V Loop and WOB, 198
Troubleshooting a P-V Loop, 199

SECTION V: Flow-Volume Loops during Mechanical Ventilation, 199
Components of an F-V Loop with Mandatory Breaths, 199
Troubleshooting with F-V Loops during Mechanical Ventilation, 201

11 Noninvasive Assessment of Respiratory Function, 205

SECTION I: Noninvasive Measurement of Blood Gases, 206
Pulse Oximetry, 206
Capnography and Capnometry, 210
Transcutaneous Monitoring, 218

SECTION II: Indirect Calorimetry and Metabolic Measurements, 219
Overview of Indirect Calorimetry, 219
Technical Aspects, 219

SECTION III: Assessment of Respiratory System Mechanics, 222
Airway Pressure Measurements, 222
Flow Measurements, 223
Clinical Applications, 223

12 Hemodynamic Monitoring, 231
Review of Cardiovascular Principles, 232
Obtaining Hemodynamic Measurements, 235
Interpretation of Hemodynamic Profiles, 240
Clinical Applications, 249
PART 4
Therapeutic Interventions—Making Appropriate Changes

13 Methods to Improve Ventilation and Other Techniques in Patient-Ventilator Management, 257

SECTION I: Correcting PaCO₂ Abnormalities, 258
Common Methods of Changing Ventilation Based on PaCO₂ and pH, 258
Metabolic Acidosis and Alkalosis, 261
Mixed Acid-Base Disturbances, 262
Increased Physiological Dead Space, 263
Increased Metabolism and Increased CO₂ Production, 264
Intentional Iatrogenic Hyperventilation, 264
Permissive Hypercapnia, 264

SECTION II: Airway Clearance during Mechanical Ventilation, 266
Secretion Clearance from an Artificial Airway, 266
Administering Aerosols to Ventilated Patients, 272
Chest Physiotherapy in Mechanically Ventilated Patients, 277
Flexible Fiberoptic Bronchoscopy during Mechanical Ventilation, 278

SECTION III: Additional Patient Management Techniques and Therapies in Ventilated Patients, 279
Importance of Body Position and Positive Pressure Ventilation, 279
Ventilator Circuit Changes, 283
Sputum and Upper Airway Infections, 285
Fluid Balance, 285
Psychological and Sleep Status, 286
Patient Comfort and Safety, 287
Transport of Mechanically Ventilated Patients within an Acute Care Facility, 288

14 Improving Oxygenation and Management of ARDS, 295

SECTION I: Basics of Oxygenation Using F1O₂, PEEP studies, and Pressure-Volume Curves for Establishing Optimum PEEP, 297
Basics of Oxygen Delivery to the Tissues, 297
Introduction to Positive End-Expiratory Pressure and Continuous Positive Airway Pressure, 299
PEEP Ranges, 301
Indications for PEEP/CPAP, 301
Initiating PEEP Therapy, 302
Selecting the Appropriate PEEP/CPAP Level (Optimum PEEP), 303
Use of Pulmonary Vascular Pressure Monitoring with PEEP, 307
Pressure-Volume Loops in Setting PEEP, 308

SECTION II: Contraindications and Physiological Effects of PEEP, 312
Contraindications for PEEP, 312
Pulmonary Effects of PEEP, 313
Transmission of Airway Pressure to Pleural Space, 313
Uses of PEEP for Problems Other than Acute Lung Injury, 314
Weaning from PEEP, 315

SECTION III: Acute Respiratory Distress Syndrome, 316
Definition and Epidemiology, 316
Pathophysiology, 317
Changes in Computed Tomogram with ARDS, 317
ARDS as an Inflammatory Process, 318
PEEP and the Vertical Gradient in ARDS, 320
Lung Protective Strategies: Setting Tidal Volume and Pressures in ARDS, 320
Long-Term Follow-Up on ARDS, 321

SECTION IV: Recruitment Maneuvers in ARDS, 321
Illustration of a Recruitment Maneuver, 322
The Function of Lung Recruitment, 322
Hazards of Recruitment Maneuvers, 324
Variability among Patients, 324
Effects of Chest Wall Compliance on Lung Recruitment, 324
Patient Evaluation for Lung Recruitment, 325
Types of Recruitment Maneuvers, 325
Summary of Recruitment Maneuvers in ARDS, 326

SECTION V: Patient Cases, 327
Case Study: Adult Respiratory Distress Syndrome, 327
Case Study: Congestive Heart Failure, 328

15 Frequently Used Pharmacological Agents in Ventilated Patients: Sedatives, Analgesics, and Paralytics, 335
Sedatives and Analgesics, 336
Paralytics, 341

PART 5
Effects and Complications of Mechanical Ventilation

16 Effects of Positive Pressure Ventilation on the Cardiovascular, Cerebral, Renal, and Other Organ Systems, 345

SECTION I: Effects of Positive Pressure Ventilation on the Heart and Thoracic Vessels, 346
Adverse Cardiovascular Effects of PPV, 346
Factors Influencing Cardiovascular Effects of PPV, 347
Beneficial Effects of PPV on Heart Function in Patients with Left Ventricular Dysfunction, 348
Contents

Part 1 Minimizing the Physiological Effects and Complications of Mechanical Ventilation, 349

Section 11: Effects of Mechanical Ventilation on Intracranial Pressure, Renal Function, Liver Function, and Gastrointestinal Function, 351

- Effects of Mechanical Ventilation on Intracranial Pressure and Cerebral Perfusion, 351
- Renal Effects of Mechanical Ventilation, 352
- Effects of Mechanical Ventilation on Liver and Gastrointestinal Function, 353
- Nutritional Complications during Mechanical Ventilation, 354

Part 17 Effects of Positive Pressure Ventilation on the Pulmonary System, 357

- Lung Injury with Mechanical Ventilation, 358
- Effects of Mechanical Ventilation on Gas Distribution and Pulmonary Blood Flow, 364
- Nosocomial Infections and Ventilator-Associated Pneumonia, 365
- Respiratory and Metabolic Acid-Base Status in Mechanical Ventilation, 371
- Air Trapping (Auto-PEEP), 373
- Hazards of Oxygen Therapy with Mechanical Ventilation, 376
- Increased Work of Breathing, 376
- Ventilator Mechanical and Operational Hazards, 383
- Complications of the Artificial Airway, 384

Part 18 Troubleshooting and Problem Solving, 391

- Definition of the Term Problem, 392
- Solving Ventilation Problems, 392
- Protecting the Patient, 393
- Identifying the Patient in Sudden Distress, 393
- Patient-Related Problems, 393
- Ventilator-Related Problems, 397
- Common Alarm Situations, 399
- Use of Graphics to Identify Ventilator Problems, 402
- Unexpected Ventilator Responses, 406

Part 20 Discontinuation of and Weaning from Mechanical Ventilation, 443

Section I: Weaning Techniques, 444
- Methods of Titrating Ventilator Support during Weaning, 445
- Closed Loop Modes for Ventilator Discontinuation, 448

Section II: Evidence-Based Weaning, 451
- Evaluation of Clinical Criteria for Weaning, 451
- Recommendation 1: Pathology of Ventilator Dependence, 452
- Recommendation 3: Assessment during a Spontaneous Breathing Trial, 457
- Recommendation 4: Removal of the Artificial Airway, 457

Section III: Factors in Weaning Failure, 460
- Recommendation 5: SBT Failure, 460
- Nonrespiratory Factors That May Complicate Weaning, 460
- Recommendation 6: Maintaining Ventilation in Patients with SBT Failure, 464

Section IV: Final Recommendations, 464
- Recommendation 7: Anesthesia and Sedation Strategies and Protocols, 464
- Recommendation 8: Weaning Protocols, 464
- Recommendation 9: Role of Tracheostomy in Weaning, 465
- Recommendation 10: Long-Term Care Facilities for Patients Requiring Prolonged Ventilation, 466
- Recommendation 11: Clinician Familiarity with Long-Term Care Facilities, 486
- Recommendation 12: Weaning in Long-Term Ventilation Units, 486
- Ethical Dilemma: Withholding and Withdrawing Ventilatory Support, 487

Part 21 Long-Term Ventilation, 473

- Goals of LTMV, 474
- Sites for Ventilator-Dependent Patients, 475
- Patient Selection, 477
- Preparation for Discharge to the Home, 478
- Follow-Up and Evaluation, 479
- Equipment Selection for Patients to Be Ventilated at Home, 481
- Complications of Long-Term Positive Pressure Ventilation, 487
- Alternatives to Invasive Mechanical Ventilation at Home, 488
- Expiratory Muscle Aids and Secretion Clearance, 494
- TTs, Speaking Valves, and Tracheal Buttons, 495
- Ancillary Equipment and Equipment Cleaning for Home Mechanical Ventilation, 501

Part 6 Noninvasive Positive Pressure Ventilation

Section 19 Basic Concepts of Noninvasive Positive Pressure Ventilation, 417

- Noninvasive Ventilation Techniques, 418
- Goals and Indications for NPPV, 419
- Patient Selection Criteria, 423
- Equipment Selection for NPPV, 424
- Setup and Preparation for NPPV, 432
- Monitoring and Adjustment of NPPV, 433
- Complications of NPPV, 435
- Patient Weaning and Discontinuation of NPPV, 436
- Patient Care Team Concerns, 436

Part 20 Discontinuation from Ventilation and Long-Term Ventilation

- 21 Long-Term Ventilation, 473
PART B
Special Applications of Mechanical Ventilation

22 Neonatal and Pediatric Mechanical Ventilation, 509
   Recognizing the Need for Mechanical Ventilatory Support, 510
   Continuous Positive Airway Pressure, 511
   Conventional Mechanical Ventilation, 515
   Weaning and Extubation, 535
   High-Frequency Ventilation, 535

23 Special Techniques in Ventilatory Support, 549

SECTION I: Airway Pressure-Release Ventilation, 550
   Other Names, 550
   Advantages of APRV Compared with Conventional Ventilation, 551
   Disadvantages, 552
   Initial Settings for APRV, 553
   Adjusting Ventilation and Oxygenation, 554
   Discontinuing APRV, 554

SECTION II: High-Frequency Oscillatory Ventilation in the Adult, 555
   Technical Aspects, 555
   Initial Control Settings for HFOV in the Adult, 556
   Indication and Exclusion Criteria for HFOV in the Adult, 558
   Monitoring, Assessment, and Adjustment of HFO, 558
   Adjusting Settings to Maintain ABG Goals, 559
   Returning to Conventional Ventilation, 561

SECTION III: Heliox Therapy and Mechanical Ventilation, 561
   Gas Flow through the Airways, 562
   Heliox in Avoiding Intubation and during Mechanical Ventilation, 563
   Postextubation Stridor, 563
   Devices for Delivering Heliox in Spontaneously Breathing Patients, 563
   Manufactured Heliox Delivery System, 565
   Heliox and Aerosol Delivery during Mechanical Ventilation, 566
   Heliox with a Mechanical Ventilator, 566
   Heliox and NPPV, 568

SECTION IV: Independent Lung Ventilation, 569
   Ventilator Procedure for ILV, 569
   Thoracoabdominal Aortic Aneurism Repair, 570
   Establishing Safe PEEP and Ventilation with a Slow Flow Infusion Maneuver for Assessment of Lung Characteristics, 571
   Establishing Mechanical Ventilation after TAAA, 571
   Recruitment Maneuvers in Postoperative Patients, 572

SECTION V: Intrapulmonary Percussive Ventilation, 573
   Equipment, 573
   Administration by Mouthpiece, 573
   Administration through a Ventilator, 574

Appendix A, 581
Appendix B, 601
Appendix C, 607
Glossary, 613
