## Volume I

### Section I

#### Basic Cell Physiology, Genetics, and Growth of the GI Tract

1. Transcription and Epigenetic Regulation <i>Juanita L. Merchant</i>	3
2. Post-translational Processing of Gastrointestinal Peptides <i>Graham S. Baldwin</i>	43
3. Genetic Tools in Gastrointestinal Diseases <i>Clara Abraham and Judy Cho</i>	65
4. Signaling Pathways Induced by G-protein-coupled Receptors <i>Enrique Rozengurt</i>	75
5. Transgenic Animal Models of Gastrointestinal Function <i>Marie-Pier Tetreault and Jonathan P. Katz</i>	97
6. Gastrointestinal Peptides: Gastrin, Cholecystokinin, Somatostatin, and Ghrelin <i>Celia Chao and Mark R. Hellmich</i>	115
7. Postpyloric Gastrointestinal Peptides <i>Guillermo A. Gomez, Ella W. Englander, and George H. Greeley, Jr.</i>	155

8. Growth Factors in the Gastrointestinal Tract <i>John F. Kuemmerle</i>	199
---	-----

9. Developmental Signaling Networks: WNT/ $\beta$ -Catenin Signaling in the Gastrointestinal Tract <i>Guido T. Bommer and Eric R. Fearon</i>	279
---	-----

10. Hedgehog Signaling in Gastrointestinal Morphogenesis and Morphostasis <i>Willemijn A. van Dop and Gijs R. van den Brink</i>	303
--	-----

11. Notch Pathway Regulation of Intestinal Cell Fate <i>Kelli L. Van Dussen, Peter J. Dempsey, and Linda C. Samuelson</i>	329
--	-----

12. Stem Cells in the Gastrointestinal Tract <i>Nicholas A. Wright</i>	359
---	-----

13. Programmed Cell Death in the Gastrointestinal Tract <i>Leonard R. Johnson and Ramesh M. Ray</i>	379
--	-----

14. Molecular Physiology of Gastrointestinal Function during Development <i>Hua Xu, James F. Collins, and Fayez K. Ghishan</i>	415
---	-----

15. The Cell Cycle <i>Vincent W. Yang</i>	451
--	-----

### Section II Neurogastroenterology

16. Development of the Enteric Nervous System <i>Heather M. Young, Donald F. Newgreen, and Hideki Enomoto</i>	475
--	-----
