Contents

INTRODUCTION ix

I. WHAT IS BEHAVIORISM? 1
   The old and new psychology contrasted.

II. HOW TO STUDY HUMAN BEHAVIOR 20
   Problems, methods, technique and samples of results.

III. THE HUMAN BODY 48
   What it is made of, how it is put together, and how it works.
   Part I—The structures that make behavior possible.

IV. THE HUMAN BODY 77
   What it is made of, how it is put together, and how it works.
   Part II—The glands in everyday behavior.

V. ARE THERE ANY HUMAN INSTINCTS? 93
   Part I—On the subject of talent, tendencies and the inheritance of all so-called "mental" traits.

VI. ARE THERE ANY HUMAN INSTINCTS? 114
   Part II—What the study of the human young teaches us.

VII. EMOTIONS 140
   What emotions are we born with—how do we acquire new ones—how do we lose our old ones? Part I—A general survey of the field and some experimental studies.
VIII. EMOTIONS 167

What emotions are we born with—how do we acquire new ones—how do we lose our old ones? Part II—Further experiments and observations on how we acquire, shift and lose our emotional life.

IX. OUR MANUAL HABITS 196

How they start, how we retain them, and how we discard them.

X. TALKING AND THINKING 224

Which, when rightly understood, goes far in breaking down the fiction that there is any such thing as "mental" life.

XI. DO WE ALWAYS THINK IN WORDS? 252

Or does our whole body do the thinking?

XII. PERSONALITY 269

Presenting the thesis that our personality is but the outgrowth of the habits we form.
