SECTION I. THE INTEGRATED RESPONSE TO A MEAL

Chapter 1	Functional Anatomy of the GI Tract and Organs Draining into It	1
	Objectives / 1	
	Overview of the Gastrointestinal System and its Functions / 1	
	Engineering Considerations / 3	
	Organs and Systems Involved in the Response to a Meal / 8	
	Key Concepts / 16	
	Study Questions / 17	
	Suggested Readings / 18	
Chapter 2	Neurohumoral Regulation of Gastrointestinal Function	19
	Objectives / 19	
	Requirement for Integrated Regulation / 19	
	Communication in the GI Tract / 20	
	Principles of Endocrine Regulation / 27	
	Principles of Neurocrine Regulation / 32	
	Paracrine and Immune Regulation / 34	
	Integration of Regulatory Systems / 36	
	Control of Food Intake / 36	
	Key Concepts / 38	
	Study Questions / 39	
	Suggested Readings / 40	

SECTION II. INTESTINAL SECRETORY FUNCTIONS

Chapter 3	Gastric Secretion	41
	Objectives / 41	
	Basic Principles of Gastric Secretion / 41	
	Anatomical Considerations / 43	
	Regulation of Gastric Secretion / 47	
	Cellular Basis of Secretion / 53	
	Pathophysiology and Clinical Correlations / 57	
	Key Concepts / 60	
	Study Questions / 60	
	Suggested Readings / 61	

Chapter 4	Pancreatic and Salivary Secretion	63
	Objectives / 63	
	Basic Principles of Pancreatic Secretion / 63	
	Anatomic Considerations in Pancreas / 65	
	Regulation of Pancreatic Secretion / 66	
	Cellular Basis of Pancreatic Secretion / 71	
	Pancreatic Pathophysiology and Clinical Correlations / 75	
	Basic Principles of Salivary Secretion / 76	
	Salivary Gland Anatomy / 78	
	Regulation of Salivary Secretion / 79	
	Cellular Basis of Salivary Secretion / 80	
	Salivary Pathophysiology and Clinical Correlations / 83	
	Key Concepts / 83	
	Study Questions / 84	
	Suggested Readings / 85	
Chapter 5	Water and Electrolyte Absorption and Secretion	86
	Objectives / 86	
	Basic Principles of Intestinal Fluid Transport / 86	
	Anatomical Considerations / 90	
	Regulation of Water and Electrolyte Transport / 92	
	Cellular Basis of Transport / 97	
	Key Concepts / 106	
	Study Questions / 107	
	Suggested Readings / 108	
Chapter 6	Intestinal Mucosal Immunology and Ecology	109
	Objectives / 109	
	Basic Principles of Mucosal Immunology / 109	
	Functional Anatomy of the Mucosal Immune System / 111	
	Secretory IgA System / 115	
	Immune Response to Enteric Antigens / 117	
	Intestinal Microecology / 119	
	Pathophysiology and Clinical Correlations / 124	
	Key Concepts / 127	
	Study Questions / 128	
	Suggested Readings / 129	

SECTION III. MOTILITY

Chapter 7	Esophageal Motility	130
	Objectives / 130	
	Basic Principles of Esophageal Motility / 130	
	Functional Anatomy of the Esophageal Musculature / 132	
	Features of Esophageal Motility / 133	

Pathophysiology and Clinical Correlations /	140
Key Concepts /	144
Study Questions /	145
Suggested Readings /	146

Chapter 8 Gastric Motility **147**

Objectives /	147
Basic Principles of Gastric Motility /	147
Functional Anatomy of the Gastric Musculature /	148
Features of Gastric Motility /	150
Pathophysiology and Clinical Correlates /	158
Key Concepts /	161
Study Questions /	162
Suggested Readings /	164

Chapter 9 Intestinal Motility **165**

Objectives /	165
Basic Principles of Intestinal Motility /	165
Functional Anatomy /	166
Features of Intestinal Motility /	169
Pathophysiology and Clinical Correlations /	176
Key Concepts /	178
Study Questions /	179
Suggested Readings /	181

SECTION IV. TRANSPORT AND METABOLIC FUNCTIONS OF THE LIVER

Chapter 10 Functional Anatomy of the Liver and Biliary System **182**

Objectives /	182
Overview of the Liver and Biliary Systems and their Functions /	182
Engineering Considerations /	185
Pathophysiology and Clinical Correlations /	194
Acute Liver Failure /	194
Key Concepts /	200
Study Questions /	201
Suggested Readings /	202

Chapter 11 Bile Formation and Secretion **203**

Objectives /	203
Basic Principles of Biliary Excretion and Secretion /	203
Bile Acid Metabolism /	204
Bile Composition /	207
Enterohepatic Circulation of Bile Acids /	211
